

Sedex API

Streamlining supply chain due diligence

In today's business environment, procurement and supply chain leaders face growing pressure to conduct thorough due diligence on suppliers. Stakeholders expect organisations to identify, assess and mitigate social and environmental risks throughout their supply chain. When sustainability data lives separate from procurement systems, conducting effective due diligence becomes a time-consuming, resource-intensive process that delays business decisions and can create blind spots in risk assessment.

The due diligence challenge: Meeting obligations without overwhelming resources

Supply chain leaders are struggling to balance due diligence requirements with operational efficiency:

- **Fragmented due diligence processes** that create blind spots in supplier risk assessment
- **Manual documentation collection** that delays supplier qualification and onboarding
- **Verification gaps** that could expose the organisation to reputational damage
- **Difficulty demonstrating responsible sourcing** when questioned by customers or investors
- **Resource-intensive reporting** that diverts procurement teams from strategic activities

The stakes are high—with increasing stakeholder scrutiny and growing expectations for transparency, organisations need to strengthen their due diligence capabilities without creating operational bottlenecks. Supply chain leaders need due diligence to become an integrated part of everyday procurement activities, not a separate exercise.

Sedex API: Embedding due diligence into your procurement workflow

Sedex API connects your sustainability due diligence data directly to your procurement systems, transforming compliance from burden to advantage:

- **Enhanced due diligence information:** Access supplier assessment status directly within your procurement platform during sourcing decisions.
- **Status monitoring:** Receive updates when supplier information changes or new audit results become available.
- **Risk-based assessment integration:** View supplier risk levels based on country, industry, and audit results alongside commercial information.
- **Documentation access:** Link directly to available assessment information from your procurement system.
- **Supply chain visibility:** Access available supplier relationship information to improve due diligence processes.
- **Audit findings incorporation:** View non-compliances and remediation status during supplier selection and review.
- **Contextualize findings:** Access full history of corrective actions and disputes against findings and non-compliances
- **Streamlined reporting:** Generate reports on supplier sustainability performance for stakeholder communications.

This integrated approach transforms due diligence from a separate compliance burden into a natural part of procurement workflow, providing both regulatory protection and business intelligence.

Unlocking value in connected systems

By connecting Sedex to your procurement systems, your organisation can achieve:

- **Better-informed sourcing decisions** with sustainability information at your fingertips
- **Enhanced due diligence processes** through access to assessment and risk data during supplier selection
- **Reduced reputational risk** through improved supplier screening capabilities
- **Faster supplier qualification** with immediate access to available assessment information
- **Improved supply chain visibility** where relationship data is available
- **Strengthened due diligence process** with systematic access to assessment results
- **Greater insight** into how audit corrective actions are managed
- **More transparent communication** with stakeholders about supply chain practices

Easy integration with your due diligence framework

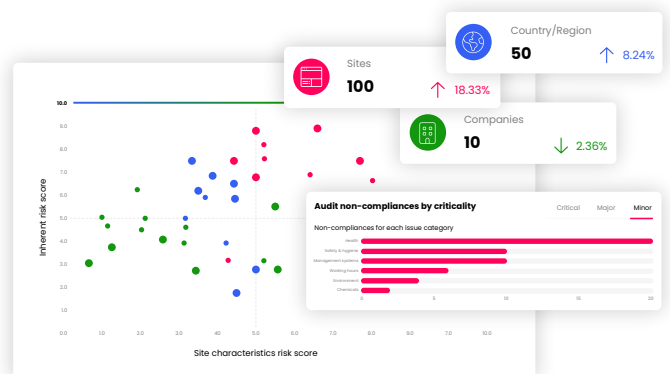

The Sedex API utilises open standards for authentication and retrieval of data, and connects easily with your existing procurement and risk management tools:

- **Major procurement platforms:** Ready integration with systems like SAP Ariba, Coupa, Jaggaer and more
- **Risk management systems:** Connect with your existing risk assessment frameworks
- **Enterprise Resource Planning (ERP):** Incorporate due diligence directly into SAP, Oracle, Microsoft Dynamics
- **Business intelligence tools and Data Warehouses:** Generate reports through Tableau, Power BI, Snowflake and other platforms

Business impact

- **Reduction** in manual data processing time
- **Real-time visibility** of supplier sustainability status during sourcing decisions
- **Automated alerts** for critical non-compliances within procurement workflows
- **Enhanced reporting** capabilities for both internal and external stakeholders
- **Increased consideration** of sustainability factors in procurement decisions

Implementation: Simple and straightforward

Setting up the Sedex API integration is straightforward. You receive authentication credentials to activate API access and begin integration. We provide detailed API documentation and a sandbox account to easily start developing the integration, with our support team available to assist with any technical questions.

The technical setup is just one part of the equation. Equally important is making the most of the data provided, which requires planning how you'll use Sedex data in your decision-making processes.

Data points available through the Sedex API

The Sedex API gives you access to a comprehensive set of data points*

BASIC INFORMATION (COMES WITH ANY PACKAGE)	RISK API		AUDIT FINDINGS API	CORRECTIVE ACTIONS AND DISPUTES API
